

Week 7 Tutorial Agenda__Cinefly

1. Report our current progress, including the outputs of several AWS models and their performance.
2. What should we do if we suddenly receive new requirements from our client urgently, but we cannot implement them quickly?
3. What should we do if we find that current technical route may not satisfy all the requirements from our client? In especial, the route was recommended by our client. Should we spend some time discovering other new solutions?
4. What should we balance our time of developing expected functions and handling our client's new ideas?
